

Title: Conflict Minerals Policy

Dear Valued Customers

SkyHigh Memory is sympathetic to the social significance of limiting the use of conflict minerals. Accordingly, we systematically respond to the use of conflict minerals in our supplier's product production process. We, SkyHigh Memory, define "conflict mineral" as 3TG minerals such as gold-tungsten, tin, tantalum, etc., which are illegally mined in the Democratic Republic of the Congo (DRC) or neighboring countries and we have established a conflict mineral management process.

SkyHigh Memory continuously strives to gain a better understanding about the use state of supply chain conflict minerals and will constantly make every effort to expand the Conflict Free Mineral Smelters and Refineries(CFS) within the cooperative firm supply chain.

SkyHigh Memory is establishing and operating a conflict mineral management operation process based on cooperation between purchase and quality control groups. Our suppliers provide us with goods, including production equipment, materials, and components, as well as services that are used in semiconductor production

SkyHigh Memory communicates with major suppliers in order to ensure their compliance Conflict Free Mineral Smelters and Refineries(CFS) and has the procedure to verify whether they comply with Conflict Free Mineral Smelters and Refineries(CFS).

If you have any questions concerning Conflict Materials or their sources please contact Quality Team via email at quality@skyhighmemory.com.

Thank you for the continued support and confidence you have placed in SkyHigh Memory.

Regards,

Wongyu Park
